quickStart™ Program

**Enterprise
Yield
Management**

About the dataConductor.com quickStart Program

The dataConductor.com quickStart Program is designed for semiconductor companies with limited resources that need a world-class yield management solution, but don't have the time or experience to design it themselves. Because Syntricity® is the only Web-based provider of hosted leading-edge yield management software, it's the only company that can offer this cost-effective, time-saving solution. With the dataConductor.com quickStart Program, Syntricity has packaged the yield management features most needed in two key business phases, for emerging and established companies.

Benefits

Cost Effective

No hardware, database or software licenses or support to purchase.

Fast

You're up and running, minimizing your time-to-market without sacrificing security concerns.

Scalable and Flexible

You can address your existing and future business needs with high-performance servers. And when your needs change, you're not locked in.

Smart

Use your valuable resources to build your products, not your infrastructure.

Emerging Company (Up to \$40 M in Revenue)

Product Focus: Characterization and Verification

Program Includes:

- ✓ Up to six dataConductor.com Power User Licenses (Product engineering, test engineering, QA and design)
